PARTS & SERVICE NEWS

REF NO. | AA02054B

DATE | September 28, 2004

Page 1 of 4

This Parts & Service News supercedes the previous issuance, AA02054A, dated March 15, 2002. AA02054A should be discarded.

| SUBJECT: | NEW 930E BRAKE TEMPERATURE MONITORING SYSTEM | | |
|---------------|---|--|--|
| PURPOSE: | To inform the field of two newly developed kits that provide a warning to the operator if brake cooling oil temperatures are excessive. | | |
| APPLICATION: | Komatsu Electric Drive Dump Trucks: 930E: 32604 - 32816, A30019, A30026 - A30120; 930E-2: A30012, A30098, A30100, A30121 - A30293, and A50295 - A30303; | | |
| FAILURE CODE: | 2C48NS | | |
| DESCRIPTION: | Brake Temperature Monitoring System Kits: Kit (XK0079) is to be installed on 930E Dum, Tracks: A30156 and Up; Kit (XK0077) is to be installed on 930E Dump Tracks: A30019 - A30155. | | |

In the field, isolated cases of brake component failures have occurre r from continual unnecessary application or from using the service brakes to supplement the rc ard ng system. These actions have resulted in the overheating of brake assemblies. Further damage occurs when the separator plates warp, and cause the brake disk(s) to continuously drag.

After the brake assembly components have become damaged, there is little indication of the failure. In most cases, the hydraulic filters begin to plug regularly due to the release of contaminants from the burned friction disks.

Two kits are now available to enhance existing 930E's with brake temperature monitoring systems. Both kits will require the installation of the latest version of General Electric (GE) software and configuration files. A new version of the GE (FL160) analog card is included in each kit in order to monitor the four temperature sensors. Complete a sembly instructions are included in each kit. Refer to Table 1 and Table 2 for a listing of parts contained in kit (XK0077) and kit (XK0079), respectively.

It is important to note that kit (XK0079) is to be installed on 930E Dump Trucks with serial numbers A30156 and up: Turk ermore, kit (XK0077) is to be installed on 930E Dump Trucks with serial numbers A3091> - A30155.

Both kits include temperature sensors which are used to monitor the temperature of the brake cooling oil. When oil temperature rises above 120° C (250° F), engine RPM rises to 1700 RPM. The hot oil warning light is then energized, and the GE system logs the event. Downloadable data will include the temperature of cooling oil from all four brakes at the time of warning. This information can be used to identify which brake assembly has triggered the warning. Refer to the flowchart in Figure 1, for further details regarding the logic of the brake temperature monitoring system.
