

PARTS & SERVICE NEWS

REF NO.	AT03116
DATE	Jul. 3, 2003
(C)	Page 1 of 25

SUBJECT: REPAIR PROCEDURE OF JUMP START PROTECTION FOR NIKKO STARTER

PURPOSE: To introduce jump start preventing cover for the starting motors and safety relays made by Nikko Elc.

APPLICATION: Refer to page 17 thru 25

FAILURE CODE: AB30Z9

DESCRIPTION:

1. Introduction

The cover has been developed to cover up the terminal of the starting motor and safety relay to prevent making jump start of the starting motor by short-circuiting the terminals of the starting motor/safety relay directly using a tool. The jump start preventing cover will be introduced in this Service News.

The jump start preventing cover being introduced in this Service News is applicable to the starting motors and safety relays made by Nikko Elc..

Regarding the starting motors made by Denso, refer to the separate Service News No. "AT02169".

2. Jump start preventing cover

1) Purpose

- To prevent making jump start of the starting motor by short-circuiting the terminals of the starting motor directly by use of some tool like a screw-driver, a resin made cover has been developed to cover up the terminals.

(In case of the jump start preventing cover for the starting motors and safety relays made by Nikko Elc., resin made nut is necessary in addition.)

- This modification is being implemented for all the models of the construction machinery being produced in Komatsu factories. Regarding the separately sold engines, they will also be equipped with the above cover in case the part number of the starting motor is the same as the one being installed to Komatsu construction machineries. Those engines which are being exclusively sold separately will not be equipped with this cover. Also, the machines in the field are not equipped with this cover.

2) Background

This modification has been made since some users sometimes start the starting motor by making direct short circuiting by use of some tool like a screw driver for some reasons, while the starting motor should normally be started by use of the starting switch key. The above cover has been developed to prevent the jump start.

3) Details of the modification and applicable machine models refer to pages 4 thru 7 and 17 thru 25.

4) Interchangeability

- This cover (and resin made nut), is not usable, as independent parts, for the current starting motors.

It is necessary to replace the cover relate to parts in kit when installing this jump start preventing cover as spare parts.

- They are interchangeable in the kit only

Refer to the interchangeability list being indicated on page 3 and 14 thru 16.

5) Prohibitions

- In case this cover (and resin made nut) is removed for some maintenance purpose, be sure to install the cover back to the original state. It is strictly prohibited to keep this cover left without installation.

3. Jump start prohibiting caution label

Since the jump start preventing cover is installed, the caution label shown below will be attached to the starting motor. Also, the caution label will also be attached to the machine when necessary.

40mm × 40mm

4. Interchangeability of the cover and nut

1) Availability as spare parts: As spare parts they will be available from December, 2002.
(For the factory production machines, this modification has been made starting from early November, 2002.)

2) Interchangeability

a) Starting motor ass'y New  Current

(Use the current starting motor for the current machines in the field (※).)

※ Machines not equipped with this cover when they were shipped out from the factory.

b) Inner parts

• Mag. switch New  Current

• Safety relay New  Current

• Motor New  Current

New  Current

New  Current

Nose-less starting motor 3 Kw/4.5 Kw

Other starting motors than the above are interchangeable.

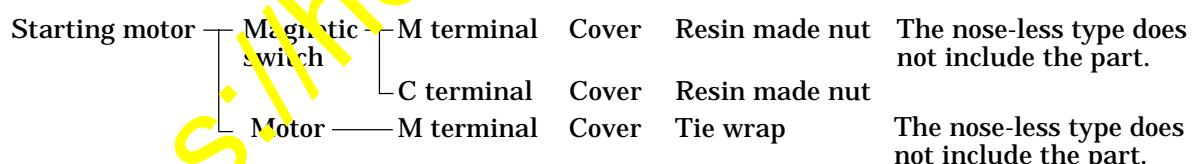

• Others New  Current

3) When installing this cover to the current starting motor

(This Service News is merely introducing this newly developed cover. It is not mandatory to install this cover to the machines in the field.)

Type	Output	Parts subject to change			Additional cover (ass'y)	
		Mag. switch	Motor	Safety relay	Main body	Safety relay
Nose-less	3 – 4.5 Kw	×	○	(Separate installation)	○	(Separate installation)
Reduction	5.5 – 11 Kw	○	×	○	○	○

4) Inner parts structure of the jump start preventing cover

Safety relay — B terminal
— C terminal

Cover, 2 types
Cover, 2 types

Resin made nut
Resin made nut

The nose-less type does not include the part.

The nose-less type does not include the part.

5) Others

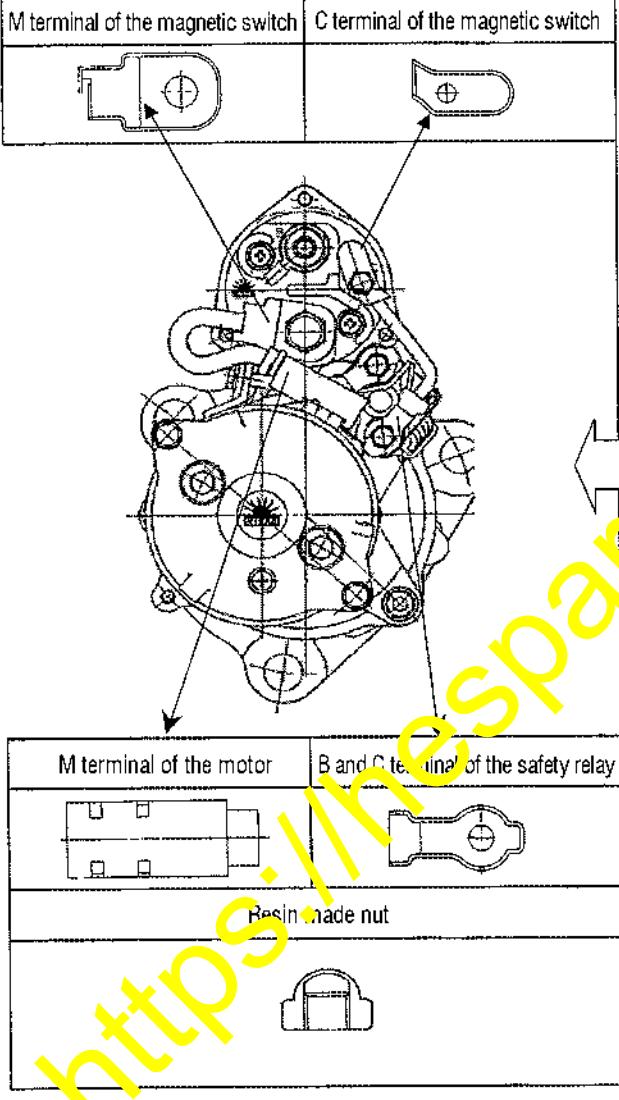

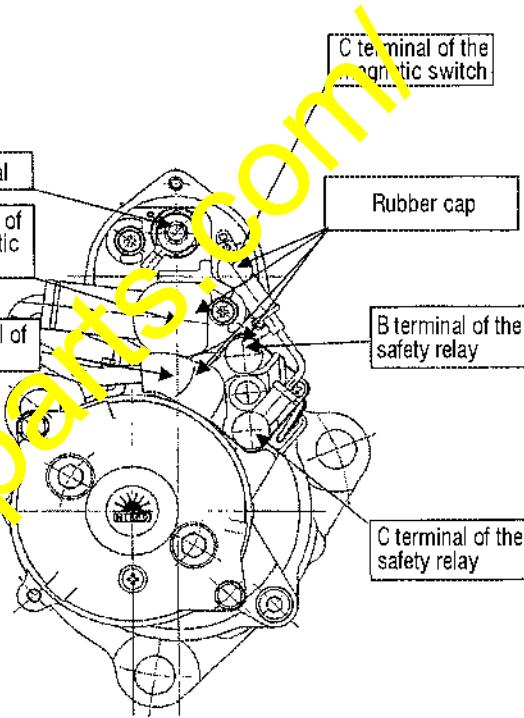

When tightening the resin made nut, it is necessary to apply the adhesive to the resin made nut. Recommended adhesive brand is Three-Bond 1401. Although the above adhesive can be purchased from Three-Bond directly, the starting motor manufacturer (Nikko Elc.) has also prepared a compact sized type containing 20 ml for the modification, which can also be purchased from them.

Manufacturer's Part No. (KD)7-85022-0003

5. Comparison of specifications between the new type (jump start preventing type) and the current type

1) Nikko Electric's reduction type

- Refer to the drawing shown below regarding the shape with and without the cover.
- The cover and the nut are to be installed to the following terminals.

	New type (Shown below is the typical type.)		
Shape	 <p>M terminal of the magnetic switch C terminal of the magnetic switch</p> <p>M terminal of the motor B and C terminal of the safety relay</p> <p>Resin-made nut</p>	 <p>B terminal</p> <p>M terminal of the magnetic switch</p> <p>M terminal of the motor</p> <p>C terminal of the magnetic switch</p> <p>Rubber cap</p> <p>B terminal of the safety relay</p> <p>C terminal of the safety relay</p>	
Changed point	New type	Current type	Remarks
a Terminal protection	Cover and resin made nut	Rubber cap	
b Material of the cover	Nylon 66		
c Resin made nut	Attached.		

2) Nikko Electric's Nose-less type

- Refer to the drawing shown below regarding the shape with and without the cover.
- The resin made cover and nut are to be installed to the C terminal.

When installing the above cover and nut, since the above resin made cover is to be installed over the existing metal nut, it becomes necessary to tighten the resin made nut to fasten the cover.

Part number of the applicable current parts
600-863-3110 (3Kw)
600-813-4410 (4.5Kw)
600-813-4610 (4.5Kw)

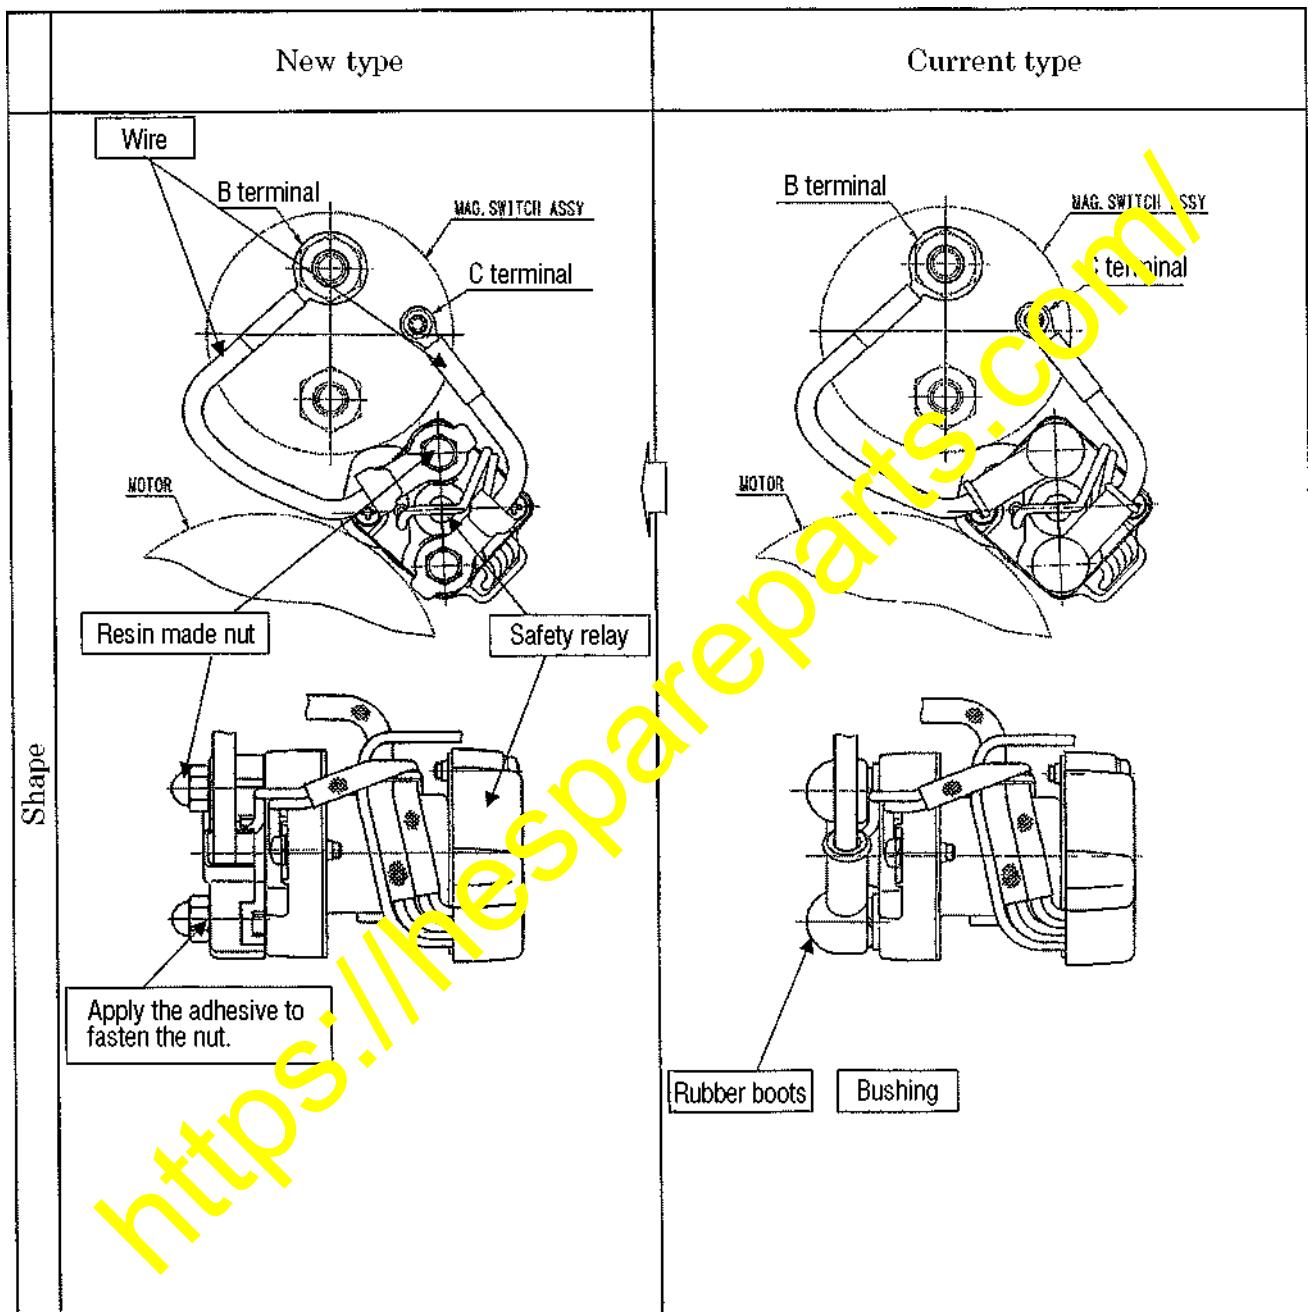

Changed point	New type	Current type	Remarks
a Terminal protection	Cover and resin made nut	Rubber cap	
b Material of the cover	Nylon 66	(Rubber cap: Nitryl)	
c Resin made nut	Attached.	—	
d Wire (3 Kw type only)	With intermediate cable connector	Without intermediate cable connector	

3) Starting motor mounting type safety relay

In case you are replacing the safety relay separately, although the resin made cover is installed to the B terminal and C terminal of the safety relay it is not installed to the terminals connecting to the B terminal and C terminal of the magnetic switch.

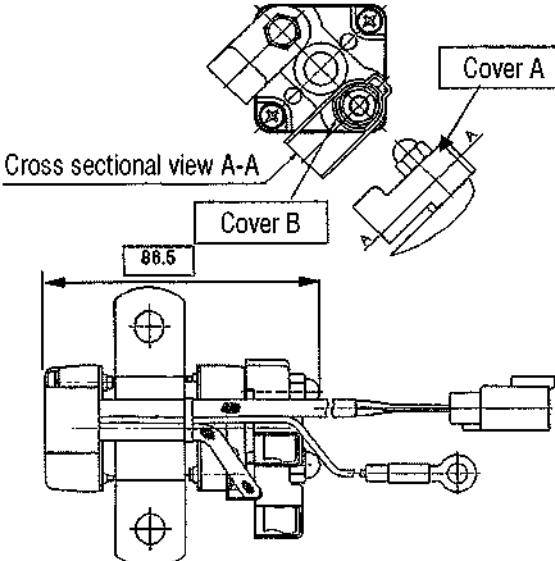

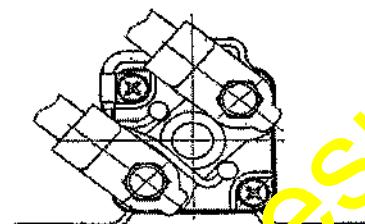

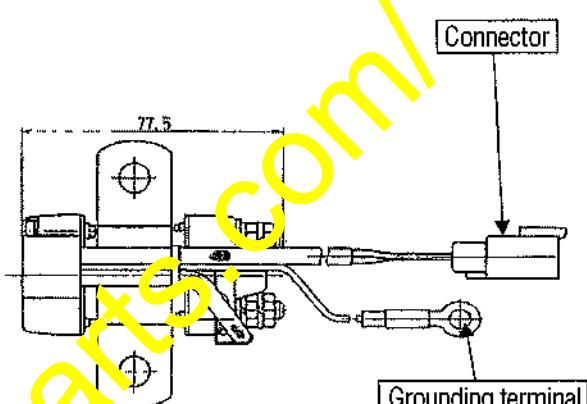

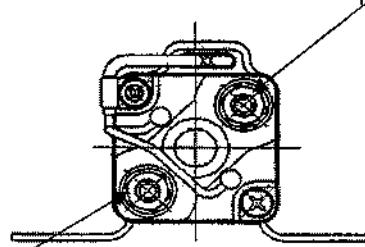

Do not remove the resin made cover from the B terminal and C terminal of the safety relay if there is not a definite reason to do so.

Changed point	New type	Current type	Reason for making the change	Remarks
① Cover (A, B)	Nylon 66	Rubber cap	To prevent starting the engine by short circuiting between the safety relay terminals.	
② Resin made nut	Attached.	Not attached.		
③ Bolt	5 mm longer (Total length also has been increased.)	—		
④ Wire	No change has been made.	—		
⑤ (Adhesive)	Apply it to fasten the resin made nut.	—		

4) Separate installation type safety relay

The cover is not in common with the starting motor mounting type safety relay cover.

	New type	Current type	
Shape	 	 	
Changed point	New type	Current type	Remarks
Resin made cover (A)	Nylon 66	Not attached.	
Resin made cover (B)	Nylon 66	Not attached.	
Resin made nut	Attached.	Not attached.	
Total length	86.5 mm	77.5 mm	
Bolt length	5 mm longer	—	

6. Wire connection

1) Nikko's reduction type

- Refer to the following instructions regarding the wire connection procedure after disassembling the starting motors other than Nikko's nose-less type starting motors.
(The connection work is not necessary when installing already assembled ass'y to the machine.)

A) C terminal of the magnetic switch

	Part name	Wire connecting procedure	Remarks
①	Resin made nut	a Remove the parts ① thru ③.	
②	Resin made cover	b Install the part ④.	
③	Nut	c Tighten the part ③ at the torque per Table 2 below.	
④	Terminal	d After installing the part ②, apply adhesive to the part ①.	
⑤	Base nut	e Tighten the part ① at the torque per Table 1 below.	
Note			
Never loosen the base nut. After applying the adhesive, finish tightening within 30 min.			

B) M terminal of the magnetic switch

	Part name	Wire connecting procedure	Remarks
①	Resin made nut	a Remove the parts ① thru ③.	
②	Resin made cover	b Install the part ④.	
③	Nut	c Tighten the part ③ at the torque per Table 2 below.	
④	Terminal	d After installing the part ②, apply adhesive to the part ①.	
⑤	Base nut	e Tighten the part ① at the torque per Table 1 below.	
Note			
Never loosen the base nut. After applying the adhesive, finish tightening within 30 min.			

C) M terminal of the starting motor

	Part name	Wire connecting procedure	Remarks
①	Resin made cover	a It is not necessary to disconnect this section after its production by the manufacturer.	
②	Tie wrap	b If disconnected by some error, make the installation as per the following procedure.	
③	Claw		
④	Terminal	c Insert the claw of the part ③ into the part ④ and fasten to the cable at the position indicated in the drawing by use of the tie wrap ②.	

d) Tightening torque (Unit: N·m)

Table 1 Resin made nut	
M5	1.45 – 1.74
M6	2.45 – 2.9
M8	7.4 – 8.8
M10	9.8 – 11.8

Table 2 Metallic nut	
M4	1.3 – 1.6
M5	2.5 – 3.0
M6	4.4 – 5.4
M8	13.7 – 15.7
M10	19.6 – 25.5
M10	15.7 – 19.6

Brass

2) Nikko's nose-less type starting motor

(Part No. 600-863-3210, 600-863-4510, 600-863-4611)

	Part name	Wire connecting procedure	Remarks
①	Resin made nut	a Remove the parts ① thru ③.	
②	Resin made cover	b Install the part ④.	
③	Nut	c Tighten the part ③ at the torque per Table 2 on page 8.	
④	Terminal	d After installing the part ②, apply adhesive to the part ①.	
⑤	Base nut	e Tighten the part ① at the torque per Table 1 on page 8.	
Note		Never loosen the base nut. After applying the adhesive, finish tightening within 30 min.	

3) Nikko's safety relay

The wire connection is in common between the starting motor mounting type safety relay and the separate installation type safety relay.

(Part No. 600-815-8960, 8941, 8951)

	Part name	Wire connecting procedure	Remarks
①	Resin made nut	a Remove the parts ① thru ③.	
②	Resin made cover, 2 pcs.	b Install the B type cover of the parts ②.	
③	Nut	c When installing the cover, direct the notched side downward and, also, direct the water draining projection toward the opposite side of the wire.	
④	Terminal	d Install the part ④. ※ Refer to drawing	
⑤	Base nut	e Tighten the part ③ at the torque per Table 2 on page 8.	
	Resin made cover A Resin made cover B	f Install the A type cover ② matching the direction.	
	The shapes of the resin made cover A and resin made cover B are different between the separate installation type and the starting motor mounting type.	g After finishing installation of the cover ②, apply adhesive to the part ①.	
		h Tighten the part ① at the torque per Table 1 on page 8.	
Note		Never loosen the base nut. After applying the adhesive, finish tightening within 30 min.	

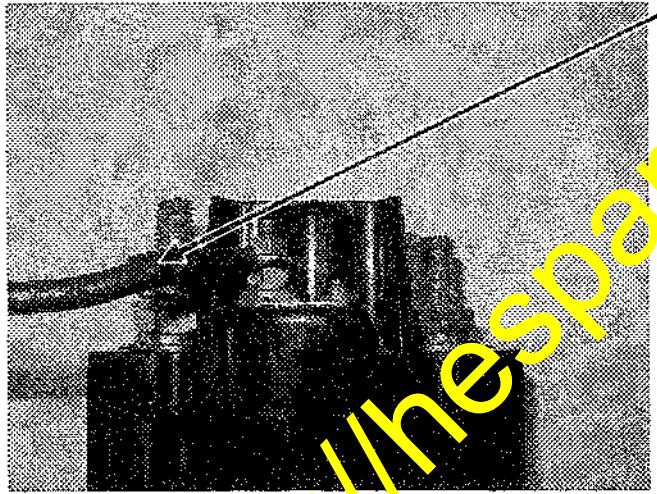

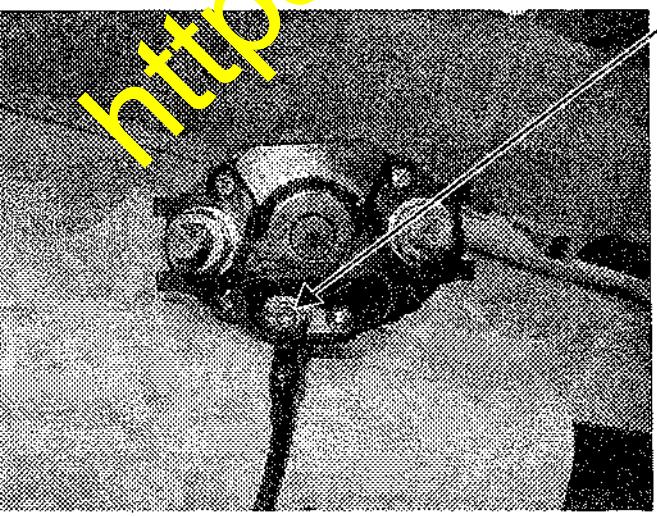

※ Reference drawing

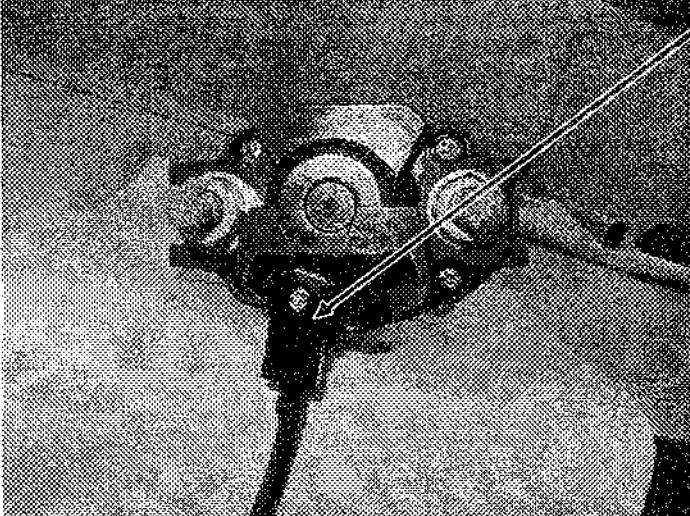

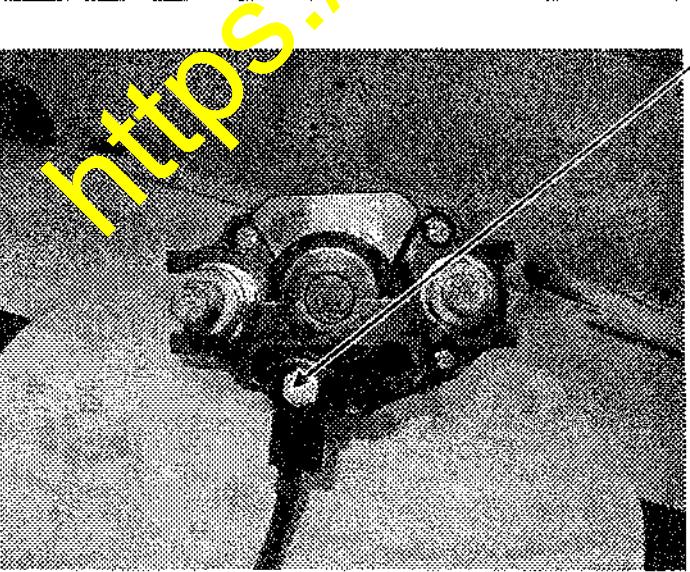

Water draining projection

- The procedure explaining the procedure as per the above Sections 2) and 3) using photographs are indicated on page 10 thru 13.

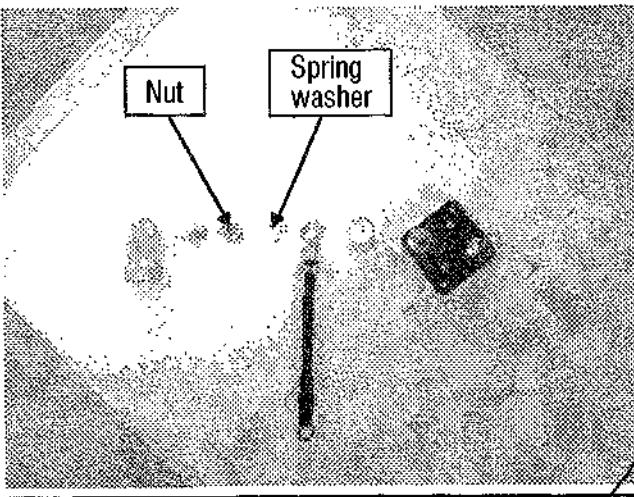

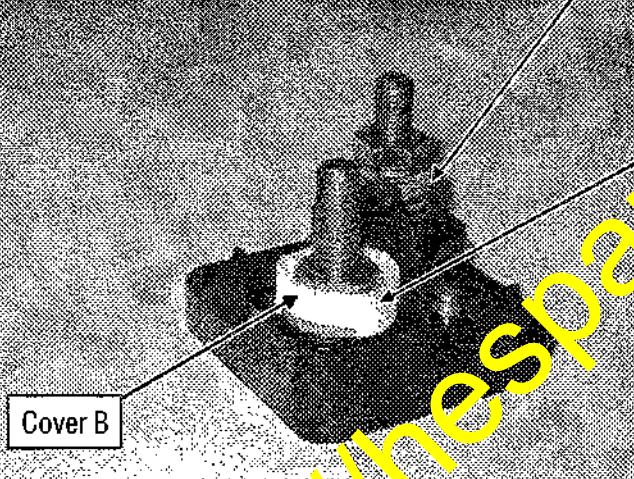

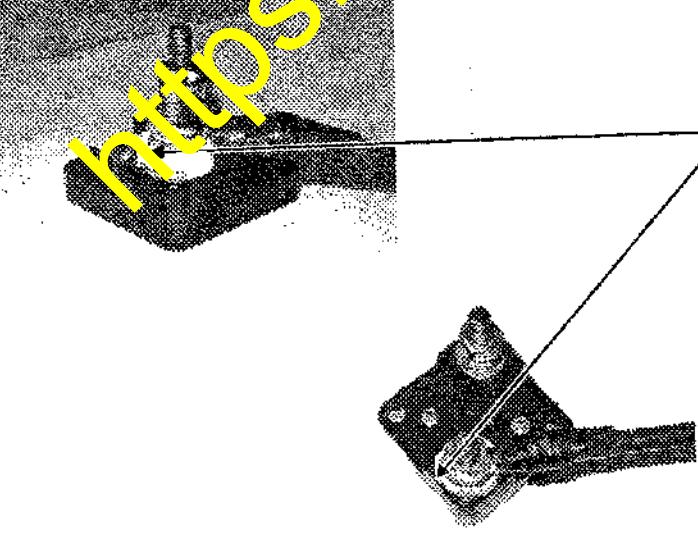

AT03116

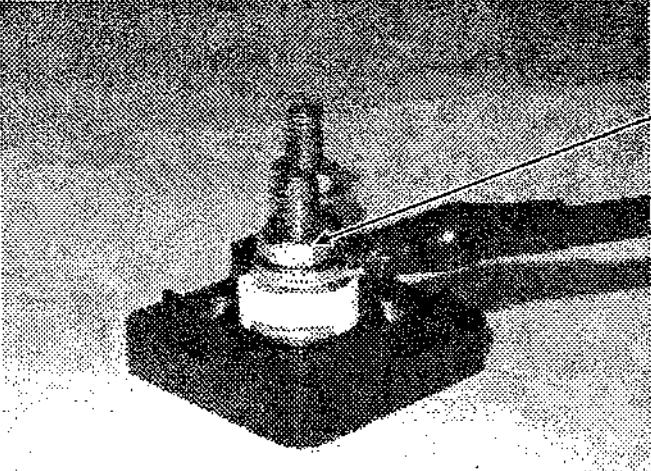

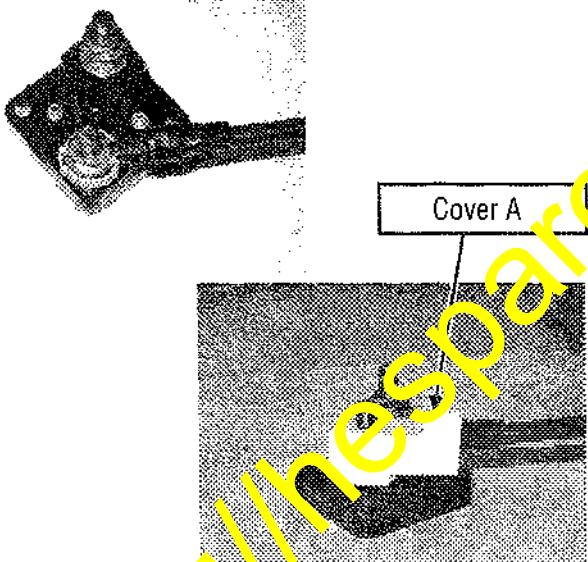

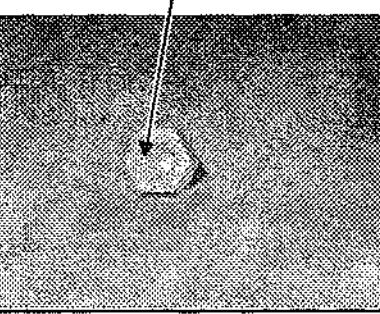

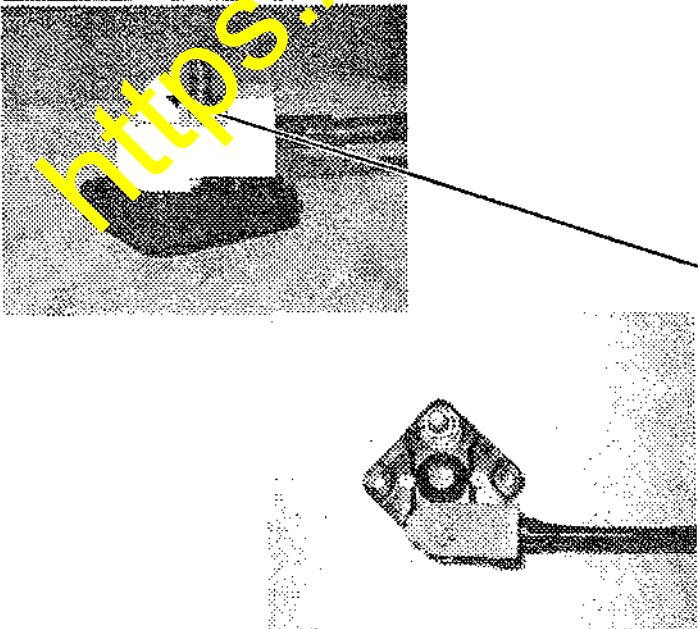

- Installation procedure for the cover for the Nikko's nose-less starting motor
With the photographs being used for explanations, the rear section of the magnetic switch only is being removed.

Structure	Procedure
<p>①</p> 	<p>① Remove the cover and the resin made nut. (Being delivered in temporarily installed state.) Remove the nut with spring washer.</p> <p>Note: Do not loosen the lower side nut.</p>
<p>②</p> 	<p>② Install the machine harness. Regarding the direction of the harness, follow the shape of the cover when installing it. Lead it as shown in the photograph shown below. (The photograph indicated on the LH side shows the lead toward left to see it clearly.)</p>
<p>③</p> 	<p>③ Install the nut with spring washer which has been removed as per the above Item ①.</p> <p>Nut tightening torque: <u>$2.75 \pm 0.25 \text{ N} \cdot \text{m}$</u> (Screw size: M5 × 0.8)</p>

Structure	Procedure
<p>④</p> 	<p>④ Install the cover.</p>
<p>⑤</p> 	<p>⑤ Apply the adhesive to the resin made nut.</p> <ul style="list-style-type: none"> ● Recommended adhesive brand is Three-Bond 1401. ● Apply the adhesive to the nut for one round of the thread.
<p>⑥</p> 	<p>⑥ Tighten the resin made nut.</p> <p>Note: After applying the adhesive onto the nut, finish installation within 30 min.</p> <ul style="list-style-type: none"> ● Nut tightening torque (Set wrench indication): 1.45 – 1.74 N·m ● Note: Tighten the nut using a set wrench. <p>Note: Do not move the wire and cover after tightening</p>

- Installation procedure for the cover for the Nikko's safety relay

Structure	Procedure
<p>①</p>  <p>Nut Spring washer</p>	<p>① Remove the nut and the spring washer.</p> <p>Note: Do not loosen the lower side nut.</p>
<p>②</p>  <p>Cover B</p>	<p>② Install the cover B in the direction shown in the photograph.</p> <p>Direct the flat surface toward the terminal side.</p>
<p>③</p> 	<p>③ Install the machine harness in the direction shown in the photograph.</p> <p>● Direct the water draining projection toward the top end.</p>

Structure	Procedure
<p>④</p> 	<p>④ Install the spring washer and the nut which have been removed as per the above Item ①.</p> <ul style="list-style-type: none"> ● Nut tightening torque: <u>$4.9 \pm 0.5 \text{ N} \cdot \text{m}$</u> (Thread size: M6 × 1)
<p>⑤</p> 	<p>⑤ Install the cover A in the direction shown in the photograph.</p> <ul style="list-style-type: none"> ● Apply the adhesive to the resin made nut. Recommended adhesive brand is Three-Bond 1401. Apply the adhesive to the nut for one round of the thread. 
<p>⑥</p> 	<p>⑥ Tighten the resin made nut.</p> <p>Note: After applying the adhesive onto the nut, finish installation within 30 min.</p> <ul style="list-style-type: none"> ● Nut tightening torque (Set wrench indication): <u>$2.45 - 2.9 \text{ N} \cdot \text{m}$</u> <p>Note: Tighten the nut using a set wrench.</p> <p>Note: Do not move the wire and cover after tightening the nut.</p>

7. 1) List of part numbers of the separate installation type safety relays
